

Deliver additional content or files from a link within a PDF file!

What is it?

CopyFILE™ is an Adobe® Acrobat® plug-in that allows linking to single or multiple files that can be copied or downloaded from a specified location.

Typically, information contained in a PDF may have other supporting or supplemental files associated with it and the CopyFILE™ allows this additional content files to be delivered through the use of a link inside a PDF.

The user component is a Reader-enabled aspect of the CopyFILE™ plug-in. It allows users to copy and download links created by the CopyFILE™ authoring component. A dialog box allows users to select single or multiple files to be copied or downloaded.

What does it do?

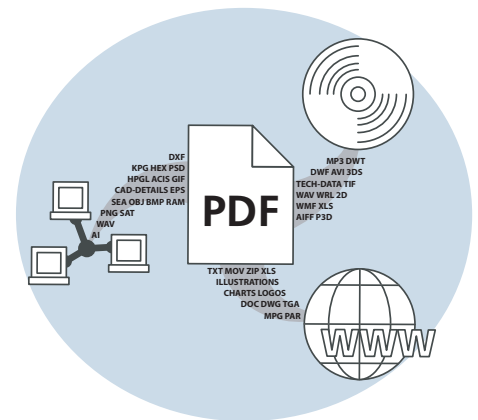

The CopyFILE™ plug-in is designed to allow a link action to be created within a PDF giving the ability to the viewer/user the option to download from one to three other files directly to their computer from the link.

The CopyFILE™ link is not dependent on any particular file extension or type. A CopyFILE™ link is ideal for distributing additional content files such as DWG, DXF, DWF, HTML, DOC, PDF, PCL, XLS, 3D-DWG, etc based on relevant information in the PDF.

The CopyFILE™ plug-in provides **value** by integrating existing PDF files with existing external technical or supplemental information to offer the files for download through a link on a PDF page.

Additionally, the CopyFILE™ plug-in provides support for both relative and hard-coded links. Relative links work across various distribution methods for PDF files such as CD-ROM, Internet, Intranet, and across network shares.

By authoring a single link using the CopyFILE™ plug-in, an organization can be confident they control the distribution of their technical content or ancillary information without having to modify or make link changes in order to distribute across multiple platforms.

Features	
Quickly create a link to copy or download separate or multiple file(s).	Author single link to work across various platforms: CD-ROM, network share, Intranet and Internet.
Use standard Acrobat® Link Tool to create CopyFILE™ links.	Control the distribution of technical data using existing PDF files.
